

HMI Glass is proud to offer Champagne Bronze, Brushed Bronze, and Satin Brass hardware finishes, providing an elegant, durable, and timeless aesthetic for Frameless Shower Enclosures.

Due to the nature of the finishing process and variations in the underlying material substrates, slight differences in color, tone, and sheen may occur between hardware components. As a result, HMI Glass cannot guarantee an exact color match across different product types or manufacturing batches.

Additionally, the bronze family of finishes is not intended to precisely match finishes offered by other fixture manufacturers such as faucet, grab bars and towel bars.

Customers should carefully consider finish compatibility when coordinating shower hardware with faucets, cabinet hardware, lighting, and other bathroom fixtures.

With proper care and routine cleaning, these finishes are designed to maintain their appearance and resist discoloration over time.

To preserve the finish, avoid using harsh chemicals, abrasive cleaners, steel wool, or scouring pads. Clean with a soft cloth, mild soap, and water only.
